

Consolidated CPE Solution

Which Customer Premise Equipment Configuration Would You Prefer?

As an I.T. Director, you're looking for solutions that deliver network and application network services with simplicity, security and cost savings in mind. EquinoxSecure is an ideal cloud-based security solution for distributed enterprises as our SCA-315 security appliance can be deployed to remote locations quickly and efficiently without complicated wiring closets or rack space setup. EquinoxSecure is in use at companies nationwide in a variety of industries including retail, restaurant, health care, financial services and cloud service providers. **The choice is easy.**

Why Choose EquinoxSecure?

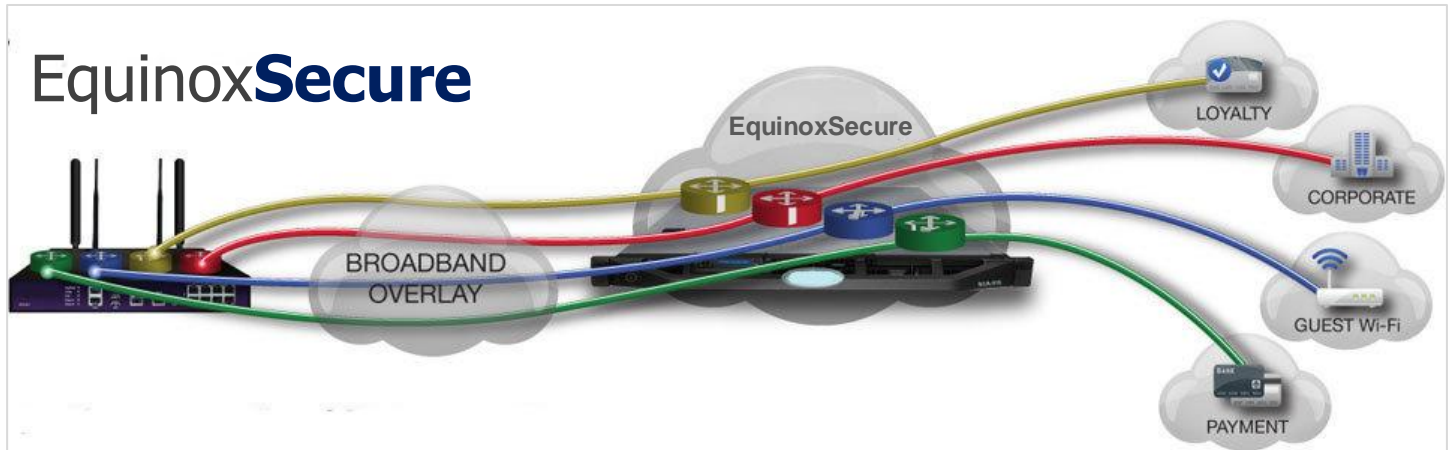

EquinoxSecure is the only solution on the market today that securely and reliably enables multiple applications over broadband through separate, compartmentalized virtual networks on a single CPE platform. The EquinoxSecure network secures critical applications across any network, and makes these applications highly available.

Benefits include:

- **Consolidation** - Lower cost by eliminating multiple customer premise devices and network connections
- **Simplification** - Simplify network and security by enabling multiple applications through ONE device versus multiple devices and service providers
- **Accelerate Deployment** - Deploy new applications faster with plug-and-play installation
- **Improve Performance** - Improve application performance with higher bandwidth and improved latency
- **Improve Uptime** - Improve network reliability with built-in wireless backup
- **Segmentation** - Lower PCI-DSS scope fully segment applications that segment cardholder data environment (CDE) from all other applications and devices
- **Increase End-Point Security** - Improve security management with 24x7x365 monitored network services

Powerful Security without the Complexity

The Equinox SCA-315 is a managed firewall/VPN security appliance on the EquinoxSecure security platform. With multi-megabit throughput, ten fast Ethernet ports supporting VLAN standards and embedded 3G/4G wireless, the SCA-315 is an excellent solution for remote retail locations, branch offices of large distributed enterprises, and any environment requiring PCI, HIPAA, GLBA or other regulatory compliance.

Solution Elements

SCA Secure Appliance

- Plug-and-play secure appliance can be installed by on-site personnel
- Hosts multiple application networks
- Supports PCI-DSS, HIPAA and other regulatory compliance
- Embedded 3G wireless backup (optional)

Broadband Overlay

- Private virtual network
- Operates over public broadband connection without using public IP address in its operation
- Allows for the selection of optimal local bandwidth
- Extend third-party ADNs without compromising the network

EquinoxSecure Cloud

- Provides advanced security and application features that can be inserted into individual applications
- Simplifies management and supports delivery to any third-party application gateway
- Transports application traffic over private MPLS backbone with built-in route redundancy and gateway resiliency

Secure Application Gateways

- Supports multiple application-specific networks that provide mission-critical functions
- Direct connections to:
 - Payment authorization gateways
 - Corporate data centers
 - Back office cloud applications
 - Many more...

SmartView Portal

- Customer web portal provides status updates of applications, network and security solution
- Monitor sites in Google Map view
- Real-time alerting of security and network events
- Review tickets being opened and resolved by Equinox support team (SMC)

Solutions Management Center

- 24x7x365 customer support
- Proactively monitors and maintains customer networks
- Professional technicians available to improve service and troubleshoot network events
- All support handled direct by Equinox technicians, no third parties or off-shore outsourcing
